Dosing Channel

On the example of filling metal powder into plastic containers with 6 to 10 kg filling weight

General view with carrying frame, product hopper, dosing channel, scale with mounted lifting lifting device and control system.

Connection of the product container to the dosing channel.

Filling:

The container is placed in the guides on the filling table. At the start of the process, the table moves upwards, lifts the the filling lid out of the supports, thus avoiding any influence on the scale is avoided. The container and the lid are balanced. The dosing channel starts filling.
