

Counter Ring with Inflatable Seal For dust-free filling

- Dust-tight connection of containers to the filling spout.
- The inflatable seal presses the inner bag from the outside against the nozzle and seals it.
- Universally suitable for the most diverse materials of inner bags.
- Universally suitable for different foil thicknesses of inner bags.
- Universally suitable for different diameters of inner bags.
- Ex-version according to ATEX available

Function

The inflation seal in the counter ring serves to press the foil against the filling spout and seal it so the filling process is dust-free.

The inflation seal is inflated before each filling process and deflated after the filling process is complete.
